From: Stan C. Strom, R.S., Environmental Sciences Division, Kalispell Regional Office

Subject: Preliminary Environmental Review (PER) for a subdivision known as  
Jette Meadows, Phase II

Ladies & Gentlemen:

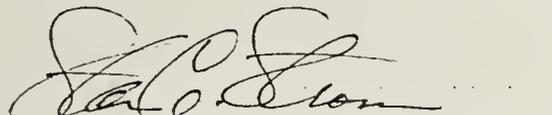

This is to notify you that a Preliminary Environmental Review (PER) has been completed by the Kalispell Regional Office of the Department of Health and Environmental Sciences regarding Jette Meadows, Phase II, a proposed 101 lot subdivision in Lake County, Montana.

Questions and comments will be accepted until June 18, 1980. One extension of time not to exceed seven days will be granted upon request if there is sufficient reason. All comments should be sent to the undersigned.

You should also be aware that this abbreviated evaluation is not an Environmental Impact Statement, but is instead a survey of possible problems leading to the ultimate decision that an Environmental Impact Statement is not warranted.

Respectfully,

A handwritten signature in cursive script, appearing to read "Stan C. Strom", written over a horizontal line.

PRELIMINARY ENVIRONMENTAL REVIEW

Division/Bureau Environmental Sciences/Subdivision Bureau

Project or Application Jette Meadows, Phase II in Lake County, Montana

Description of Project Phase II has been adjusted to 101 lots on slopes and terraces north of Phase I. It involves lots from 1.3 acres to 4.5 acres in size generally, with large common areas designated, community water system(s) and individual onsite sewage disposal.

POTENTIAL IMPACT ON PHYSICAL ENVIRONMENT

	Major	Moderate	Minor	None	Unknown	Comments on Attached Pages
1. Terrestrial & aquatic life and habitats		XXXX				
2. Water quality, quantity and distribution			XXXX			
3. Geology & soil quality, stability and moisture			XXXX			
4. Vegetation cover, quantity and quality			XXXX			
5. Aesthetics			XXXX			
6. Air quality				XXXX		
7. Unique, endangered, fragile, or limited environmental resources				XXXX		
8. Demands on environmental resources of land, water, air & energy			XXXX			
9. Historical and archaeological sites					XXXX	

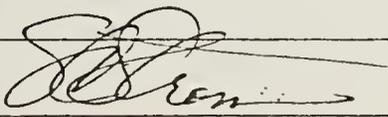

POTENTIAL IMPACTS ON HUMAN ENVIRONMENT

	Major	Moderate	Minor	None	Unknown	Comments on Attached Pages
1. Social structures and mores				XXXX		
2. Cultural uniqueness and diversity				XXXX		
3. Local and state tax base & tax revenue			XXXX			
4. Agricultural or industrial production			XXXX			
5. Human health		XXXX				Note 1
6. Quantity and distribution of community and personal income					XXXX	
7. Access to and quality of recreational and wilderness activities			XXXX			
8. Quantity and distribution of employment				XXXX		
9. Distribution and density of population and housing			XXXX			
10. Demands for government services			XXXX			
11. Industrial & commercial activity				XXXX		
12. Demands for energy			XXXX			
13. Locally adopted environmental plans & goals			XXXX			
14. Transportation networks & traffic flows		XXXX				Note 2

## PRELIMINARY ENVIRONMENTAL REVIEW

### Jette Meadows Phase II Lake County, Montana

The general area in which this proposal is located has been subjected to previous subdivision involving similar density. The previous phase of this particular subdivision was, however, in an area with much less slope, fewer bedrock problems and little groundwater near the surface. There are few similarities.

Jette Meadows, Phase II consists of a proposed 101 lots next to Highway 93, approximately 5 miles northwest of Polson, MT. Community water systems will supply domestic water but complete details are not yet available.

The proposal is located in an area of magnetite-bearing quartzitic argillite and argillite bedrock, weathered near the surface, with varying glacial overburden of (stony silt loam) till with subangular gravels and cobbles in silty loam. The thickness of the till deposition lessens on the lots higher in elevation and to the southeast. These upper lots have bedrock at 2 to 8 feet from the surface, which is struck in varying directions. The northwestern and north central areas are lower and contain some remnants of glacio-fluvial and alluvial action.

In one area at the northern end of the tract, enough near surface water has been encountered to indicate entrapment by a nonpermeable layer, or a large spring seep. Sewage disposal sites have been designated away from such wet areas.

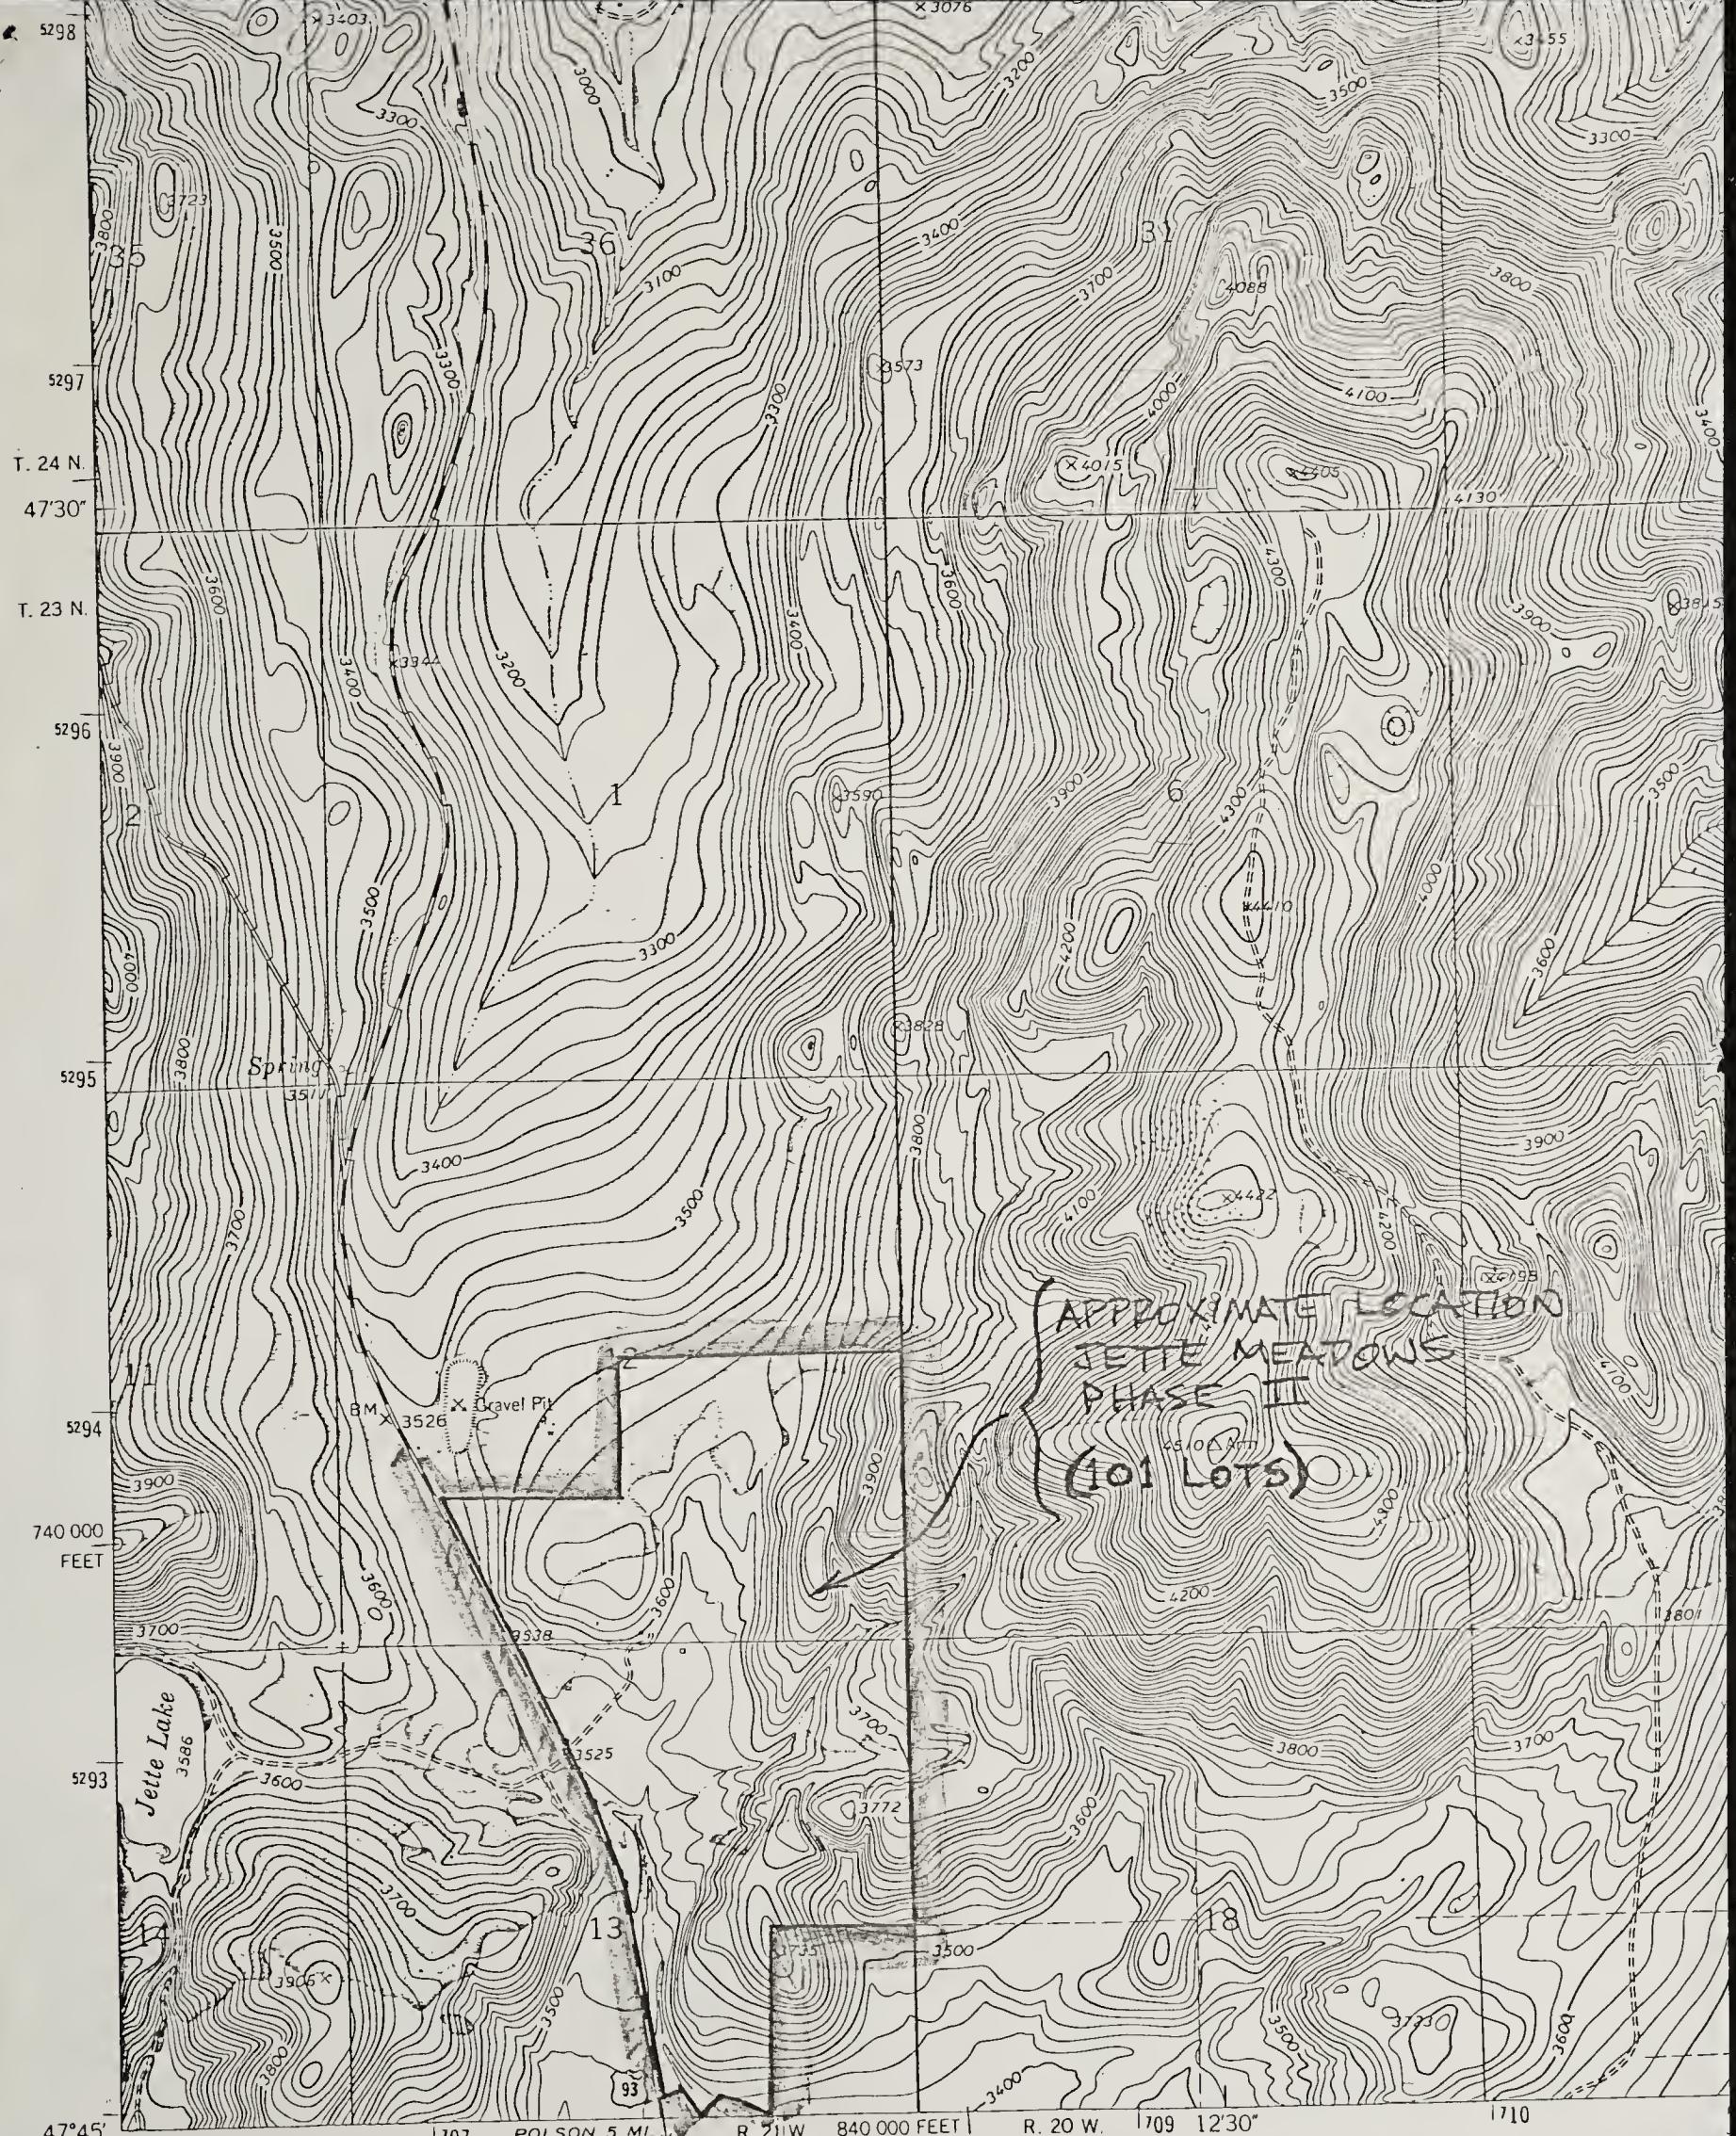

#### Note 1

There are a dozen or more lots of this proposal located in the southern parts of the plat on elevations above 3550 which have certain limitations in regard to sewage disposal. Specifically the near-surface fractured bedrock and evidence of pervasive fractures and striking. These lots, (#88 through 101) also have excessive slopes in some areas and relatively little flexibility in disposal site selection. The human health risk involved in this situation lies in the fact that two or more wells for domestic water sources are presently located on or near these lots, in areas underlain by the same bedrock. Such situations can produce wells contaminated by sewage effluent which can travel great distance in fractured rock. If wells are properly constructed, including casement to consolidated rock, and if sewers are installed in the adequate separation from bedrock interfaces, such contamination is less likely. Not enough information is yet available on well construction to evaluate this risk.

#### Note 2

In recent years over 250 new homesites have been generated in this general area and a related increase in traffic can be anticipated on the highway from 3 or 4 access points in the area. During peak tourist seasons significant congestion could occur in these areas on Highway 93 which is reputedly sensitive to such congestion.

The history of the United States is a story of growth and change. From the first settlers to the present day, the nation has evolved through various stages of development. The early years were marked by exploration and the establishment of colonies. The American Revolution led to the birth of a new nation, and the subsequent years saw the expansion of territory and the growth of industry. The Civil War was a pivotal moment in the nation's history, leading to the abolition of slavery and the strengthening of the federal government. The 20th century brought significant social and economic changes, including the rise of the industrial revolution and the emergence of the United States as a global superpower. Today, the United States continues to face new challenges and opportunities, and its history remains a source of inspiration and guidance for the future.
